Tech Management

We are your international full-service supplier for technical congress equipment and support.

We do not only strive for solutions tailored to your requirements and personal assistance, as well as high quality technical expertise and devices, but also support your project from the first planning meeting until its successful finalisation.

Well-proven international experience, comprehensive know-how and a competent team of consultants and technicians guarantee first class results.

We offer AV/IT services as well as a wide range of innovative, reliable solutions and will be pleased to assist you with the following services:

- Planning, equipment & implementation of congresses, exhibitions & events
- Production services
- Implementation of self-service technology
- Digital signage & entertainment systems
- Multimedia consulting
- New media applications
- Audio, video, lighting
- Presentation technologies
- Internet streaming

Presentation Technology

The H82 SlideCenter offers a smart and efficient way to take care of your speakers' requirements with regard to their lectures. As a centerpiece of scientific congresses, the quality of the speakers' presentations is crucial for the success and the reputation of your conference.

The SlideCenter automatically allocates presentations to the corresponding session halls and rooms. When developing our SlideCenter software, we mainly focalsied on the ease of use as well as on absolute precision of the software. Thanks to its versatility our solution is adaptable to any scenario and supports MS Windows® as well as Apple Mac® operating systems.

Our SlideCenter solution consists of an interaction between:

Preview centre: At a central point of the venue, all presentations will be gathered, controlled and distributed to the respective session halls. The preview centre staff will provide any technical support needed by the speakers during each step of the procedure.

Session halls: All presentations will be monitored and supervised directly from the SlideCenter enabling us to optimise our service efficiency and to guarantee your speakers the required reliability during their speeches.

The various modules of this software enable the following functions:

- A delay-free implementation of the scientific programme
- Optimised time management for the speakers by reducing their efforts on-site
- Reduced number of technical staff due to our self-explaining software and integrated communication with the administration
- Quick and easy changes regarding schedule or presenting speakers
- Room agenda displayed on screens outside the respective hall
- An option for overflow (if an additional auditorium is needed)
- A session overview in each room
- An automatic slide during session breaks or for inactive session halls

H82 medientechnik GmbH

Tech Gate Vienna
 Donau-City-Strasse 1
 1220 Vienna / Austria
 Tel +43 (0) 1 494 15 44
 Fax +43 (0) 1 494 15 45
 office@H82.eu
 www.H82.eu

The SlideCenter Package includes:

- Server and administrator area including gateway
- Check-in terminals
- Preview terminals (internet connection optional)
- Notebooks in session halls
- SlideCenter administration staff

To be supplied by the venue:

- Internet line
- LAN connection in every room & preview center
- Tables, chairs for preview centre
- Back office with network connection
- Hosts for operation

Number of terminals required at the preview centre:

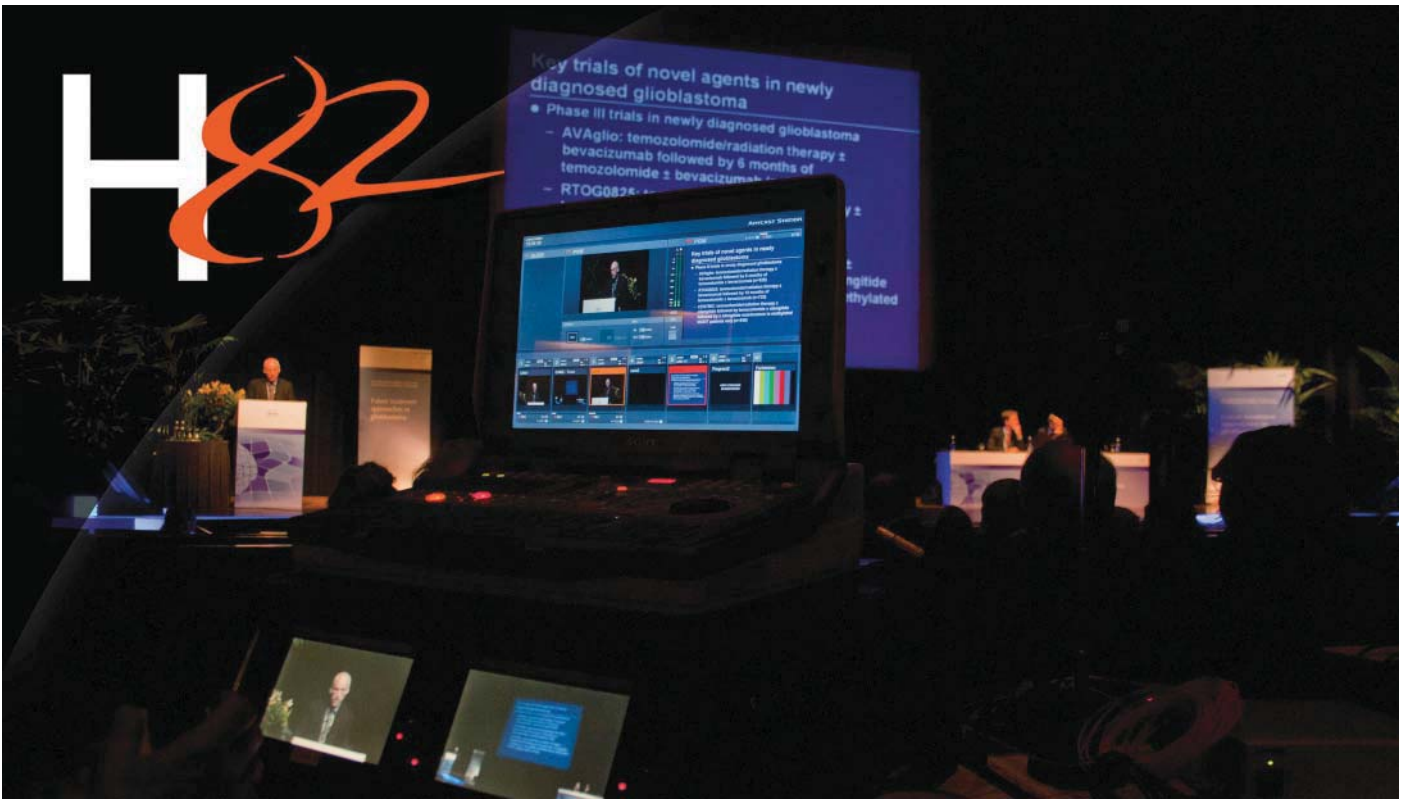

- 300 presentations = 6 Terminals
- 400 presentations = 8 Terminals
- 500 presentations = 10 Terminals
- 1000 presentations = 20 Terminals

Additional Information:

- The SlideCenter is compatible with registration and guiding systems (agenda can be shown on plasma screens)
- Number of hosts in accordance with figures above
- Local hosts will get an introduction to the SlideCenter software
- Speakers' list will be requested prior to the event

Video Recording & Streaming

Give your project a larger efficiency range and higher durability through on-line streaming.

Simple Stream is the transmission of an image source plus audio onto the internet.

The image source can either be a video recording or presentation slides of any kind and constitutes the basic and most cost-efficient streaming option.

Advanced Stream stands for the transmission of two or more image sources plus audio onto the internet.

Through our picture-in-picture visualisation, speakers and presentation slides will be broadcast live on the web. Recordings through up to four cameras, as well as several overlay- and cross-fade effects guarantee a lively, professional result.

According to your requirements, all live-streams will be broadcast on the internet as Flash® or Windows® media content and will be available at national or international level, without any limitation with regard to simultaneous user access.

Through our optimised production system, all media are available as on-demand streams shortly after production.

In order to facilitate access to all streams of the related project, we recommend the use of our streaming platform CNTV. On this platform, all streams can be filtered in chronological order, per content or other criteria, as well as tagged with a story picture.

Furthermore, CNTV is equipped with optional features like chat, password protection, pay-per-view, etc.

H82 medientechnik GmbH

Tech Gate Vienna
Donau-City-Strasse 1
1220 Vienna / Austria
Tel +43 (0) 1 494 15 44
Fax +43 (0) 1 494 15 45
office@H82.eu
www.H82.eu

The media platform of H82 Medientechnik GmbH

CNTV is a P2P media platform compatible with all current operating systems and supporting all relevant video formats such as flash®, windows media®, quicktime®, real media®, and mobile devices.

CNTV was developed for a wide range of applications, particularly for, but not limited to:

- Live and on-demand video streaming
- Webcall and webcast
- Multimedia news release
- Webcast for presentations
- Online tutorial
- Screencast
- Streaming for events and congresses

CNTV presents itself as the ideal platform for:

- Internal communications
- Sales & marketing
- Public relations
- Investor relations
- Pay-per-view

PAGE

A unique and highly customizable PAGE will be created for you. This PAGE will allow you to individualize the visual appearance including header style and graphics, the page icon, and the overall color scheme according to your personal preferences. You will be able to insert your banner advertisement in the footer; CNTV will supply you with an adserver if so required.

Your PAGE will display your STORIES. STORIES will be presented either in chronological order or ranking the most recent one on top (blog style). A live stream STORY will always be highlighted and placed on the very top of the list. Each STORY has its own STORYPIC with a short description attached. A legal notice, terms of usage, and a contact form including the publisher's e-mail address will be available. Every PAGE offers the possibility to subscribe to an RSS-feed.

The screenshot shows a webpage header with a blue background. On the left is the European Geosciences Union logo. On the right is a map of Europe. Below the header, there is a list of three stories, each with a circular icon and a text description.

European Geosciences Union
Dedicated to the pursuit of excellence in the geosciences and the planetary and space sciences for the benefit of humanity.

EGU Keynote Closing Lecture given by Jan Smit

Fax +43 (0) 1 494 15 45
office@H82.eu
www.H82.eu

STORY

Your STORY's main feature is a video player with a size of 640 x 360 pixels (minimum), although this is far from being all there is to it. You can choose among a wide variety of optional features such as:

- Password protection
 - Connecting it to a web-shop for pay-per-view
 - Adding text, photos, web-links or hyper-links with downloadable content
 - Showing instant text messages relating to currently streaming live content
 - Providing the user with up to four different language versions of the same story. This feature is possible for live-streams and for on-demand content.
-
- For live-stream STORIES, you can insert questions & answers in an interactive text-based chat room.
 - Attaching special banner advertisements to any particular STORY
 - Further configuration options include, amongst others:
 - Viral plug-in capability for embedding the STORY in any other website
 - Link-back to your own website
 - Add-on plug-in: play another movie sequence (e.g. a promotional trailer), handled by our own ad-server if so required, before and after your STORY. Profit from the very short slot while the video content is loaded to display a STORYPIC or any other still graphic (your company's logo, etc.)
 - Even while the video-player showing, your STORY can easily be embedded into any website, full control over the content always remains with you!

What's more?

The full integration of any PAGE or STORY into your website is as easy as adding a web-link to it. As an option, you can also embed the full video player. Usage statistics can be provided for your PAGE, your STORY, and the embedded video player via google© analytics. If you would like to provide your customers with pay-per-view content, a full web-shop solution will be set up for you at a very reasonable supplement. This feature not only allows your customers to purchase contents by using any major credit card company, you even can provide them with electronic vouchers. We furthermore offer to organize all invitation procedures for your media event by accessing your customer e-mail database.

Anything more still?

For the production of your video content, we fall back upon all the relevant tools of a professional TV-studio, so as green screens, fixed or animated backgrounds, additional embedded video content, connection to presenter notebooks, overlaying of credit rolls, picture-in-picture, lower-thirds, etc.

We are striving to establish and reinforce a strong and durable relationship with you as our customer, always working on further improving our service to meet your current and future requirements at the best. As such, CNTV is subject to constant software development. Our aim is to provide you with upgrades and enhanced functionality and always remain a reliable partner to you.

AV Services

For visually and auditorily stunning impressions of your event as well as competently planned presentations, we provide you with all required technical devices and a responsible-minded on-site support.

Audiovisual Design

Drawing upon our reliable long-time experience, we choose the technical equipment for your stages and session halls, functionality, cost effectiveness and high quality being important aspects in this regard.

Our hardware pool has proven at international congresses, containing a rich store of beamers, LED and LCD screens, as well as sound systems, various microphones and much more.

Let us know your ideas or goals – we take care of elaborating the best choice of devices and vouch for an expert implementation.

Light Design

We draft a topic-referred lighting concept for your meeting and put your stages, session halls, foyers and exhibition booths, etc. in perspective by setting up a suitable illumination ambience.

Our portfolio offers various solutions for indoor and outdoor areas:

To create an enjoyable outdoor atmosphere, we provide an assorted list of spotlights, LED panels and architecture lights.

IT Rental

At preliminary stages, our IT specialists are pleased to develop for you the best project-related solutions. We offer for rental professional IT items, such as notebooks, computers, servers, video encoders, displays and projectors. Infrastructural plannings are included in our services – logistically optimised to meet your requirements.

Office-PCs with various features in several languages and configurations.

Apple® Hardware

Apple Mac Pro®: Multimedia, video editing, encoding – our equipment leaves nothing to be desired. As a matter of course, we furthermore supply the appropriate peripheral devices. We offer Apple Mac Book® and Apple Mac Mini® with Apple® and Windows® system software and all required programmes.

Notebooks

Our multimedia notebooks are optimised for presentations without any limitation.

Office laser printer

Our laser printers are suited for high printing volumes and excel due to their high speed and durability. Further printers (A3 color laser, ink-jet, etc.) are also at your disposal.

TFT Displays

Displays from 17" up to 50" can be rented. In addition, we offer wall brackets, stands and all necessary peripherals.

Digital Signage

Electronic displays, projectors and LED/LCD screens are more versatile than conventional signage systems. They offer a wide range of application possibilities for your advertising and signage concepts.

Our digital signage software 'Presentation Control' is a unique tool for administrating:

- Videos
- Powerpoint presentations
- Text files
- Pictures
- Live transmissions
- TV stations
- Websites

All formats can be displayed on plasma and projector screens as well as on LED and LCD monitors.

Presentation Control has an integrated calendar function

Media can be immediately launched on the target systems or integrated into a time schedule.

Presentation Control supports group definitions

For a better content administration, they can either be displayed on individual target media (each screen displaying a different presentation) or on different groups of screens. All applications are centrally managed by an editor.

Presentation Control is easy to use

Even an inexperienced user can become a programming director and edit contents for the display network. Upon request, we provide on-line operational services through our MMOC (Multimedia Network Operation Centre).

H82 medientechnik GmbH

office@H82.eu
www.H82.eu

Description

The basic idea for the development of PresentationControl was to improve the inflexible handling of multimedia contents in presentation systems through simple, cost-efficient and spontaneous media and information management. PresentationControl allows you to distribute any PC-compatible contents to different presentation locations. In addition to multimedia contents, you may also include control commands to integrate light, volume and other control functions. This is very useful in building automation, automated exhibition, museum, industrial, display window and showroom applications.

PresentationControl differentiates between content management and target systems:

Content management

This part manages the multimedia contents and control command distribution, can instantly display or execute and bring them into chronological sequences.

Target system

The target system presents the multimedia contents and provides feedback to the control desk.

Control systems

You can easily integrate control and regulation functions, e.g.:

- Lighting (EIB, Luxmate, Lutron, DMX, etc.)
- Multimedia / audio / video / show control
- Relay / motor control
- Heating / air conditioning
- PC applications
- Presentation system control (on / off / source selection, etc.)
- Conventional presentation media (TV, DVD, video, etc.)

Multimedia contents can be displayed by means of control commands Applications / features:

- For exhibitions, showrooms, department stores, hotels, conference centres
- For advertising, signage, product information, company presentations

Additional functions:

- Contents can be updated during continuous operation without any interruption
- Contents can be viewed on the target systems selected at a mouse click
- Easy handling, clear management
- Extension to lighting, switching and control functions

Extensions

PresentationControl can present webpages as well.

This feature also allows you to display live media (multicast streaming), tickers and agendas from databases. Depending on the technical equipment available on site, you can also show TV programmes.

The system generally adapts to the HTML pages supplied and displays them in full-screen mode. This ensures easy integration into existing structures.

Remoting & maintenance

On principle, the clients are not disconnected from their power supply. In an integrated installation, a remoting software is set up; a watchdog monitors the clients and re-starts the software in case of malfunctions.

H82 medientechnik GmbH

Tech Gate Vienna
Donau-City-Strasse 1
1220 Vienna / Austria

Fax +43 (0) 1 494 15 45
office@H82.eu
www.H82.eu

The system in detail

1. Content management – the commands

PresentationControl has an intuitive user interface; its screen has four independent parts:

- Display of media and control commands
- Status of clients connected
- Daily schedules including calendar and playlists
- Selection of target systems

2. Content management – the text editor

You can provide texts with backgrounds (graphics) to generate rapidly a CI-compliant presentation. It is displayed locally in the 4:3 or 16:9 format so that it can be adjusted to the front-end equipment available.

3. Content management - Video

PresentationControl supports commonly used file types. You can preview the videos either on the screen or locally. The local preview starts in full-screen mode, thus you can check in advance whether the video files supplied can actually be displayed.

4. Content management - internet

PresentationControl supports most internet file types: Streaming videos, flash, framesets, tickers and much more.

By integrating multimedia files in internet pages, you can display e.g. live videos and TV channels. Multicast streams can ensure that the target systems run in perfect synchronisation.

5. Content management - sequence

The playlist allows you to create a time sequence for the media to be displayed. You can define switches from a video to a signage application with PresentationControl automatically recognising and directly suggesting the length of the video. The sequence is independent of the time of day and is automatically repeated until the next event scheduled in the playlist. Hence, it operates automatically as a signage or information system.

6. Content management – target system management

The target systems are managed in a special window. On principle, the same intuitive handling as in the main content management screen.

- Selection of the media to be updated
- Status of the clients and a big green button for starting the updating process
- Display of existing target system groups
- Creation of new target systems and information of the target systems

After selecting the media and target system, you start the process which automatically provides feedback of successfully displayed media.

Exhibitors' Service

We take care of your customers

Given the industry partners' key role for every congress, our aim is to support them in their planning with regard to technical requirements for satellite symposia and exhibition booths.

We offer a wide range of AV and IT equipment as well as video recording and streaming services.

Upon request and according to the special requirements of your congress, we issue customised industry order sheets, which facilitate the order process and can easily be inserted into your exhibitors' manual.

Requests and orders will be managed directly with our experienced staff so to guarantee a quick and goal-orientated communication before and during the congress. As a matter of course, we offer our clients efficient and uncomplicated assistance, regardless of whether our support is needed concerning a complete installation or for applying for instance first-aid to a speaker's laptop.

With the leadsystem exhibitors are able to collect contacts by scanning the delegates' badges, to transfer the data electronically and to add remarks to the entries.

The final list of contact details will be delivered to the client after the end of the event.

Individual Solutions

We appreciate new challenges and look forward to realising your ideas, may they also be beyond the common technical requests. Our specialists will get together and brainstorm for finding a fitting answer according to your specifications.

Thereby we never look for the most simple, but for simply the best solution.

Please find here a few examples of some individually tailored projects and pioneering work:

- Commercial webserver in 1995
- First kiosk with webbrowser in 1996
- First public internet terminal in Austria in 1999
- Internet connection on a ship in 2002
- Self-service terminals for the University of Vienna in 2002
- Digital signage system for the Austria Centre Vienna, Austria's biggest congress centre 2005
- Self-service payment terminals for the Centre for Sports Sciences and University Sports in 2006
- Self-service certificate printing terminals for the University of Vienna in 2007

In all fields and phases of your project we ensure smooth implementation in line with your plans. Customer orientation and reliability are our highest principles.

Be it in individual production areas or in the implementation of entire processes, we guarantee prime quality down to minute details.

Creative know-how and electrifying ideas ensure the uniqueness of your project.

Registration

Our registration solution is the most efficient tool for your congress.

Our web-based registration software enables to pre-register also prior to the congress. On-site we will install a server containing all data and take care for the service and support from the back office.

We also arrange the registration counters, print the badges, brief the hosts, hand out scanners to the exhibition and track all necessary movements. By default our barcode system handles all kinds of situations.

Our goal is to provide a clear registration process therefore we take care of all technical questions in this regard.

Internet Area

We offer a wireless LAN solution as well as fully equipped internet stations. Our internet stations consist of space saving terminals, notebooks and printers, providing the possibility of individual branding:

- start page
- screen saver
- mouse pads

can be equipped with any logo or layout requested.

The software allows multilingual browsing in 7 languages and is run by a secured operating system. Per default we also provide multilingual, switchable keyboards.

Cyber Terminal

Our Cyber Terminal is a slim and light transportable working station for indoors. Its decent design and individual branding allow various ways of application on each operating site. It can be brought into action in different situations, please find a few examples as follows:

- internet area
- exhibition booth
- information point
- self service terminal
- POI and POS station

Transport and set-up are easy – the whole terminal fits into a handy bag after dismantling.

Terminal specifications

Height/Width/Depth of the terminal (constructed):
206cm/102cm/50cm

Mobile Devices

Direct communication to your target group is a must have. You can send advertisements, invitations, reminders or links for live streams of symposia and selected sessions. This type of commercial messages may be more accepted when receiving them on an incentive mobile phone than on the delegates' private device. Furthermore, your invited delegates have the additional benefit of a supplementary tool in their congress bags which makes them stand out from standard congress participants.

Translation H82 mobile devices enable translation services for over 30 languages in order to assist your invited guests in case of possible communication difficulties.

Navigation Through the integrated navigation system your delegates will find the shortest way from A to B and to sundry points of interest in no time at all, giving them the security of reaching their destination always directly and in time.

Internet Web access at any time and place – with affordable up- and download charges.

Phone Calling without roaming costs and at an economic local rate. In addition, the SIM prepaid card remains in your guests' possession even after having returned the device.

Applications Day by day we create new apps to be integrated, such as voting system, countdown timer, etc.

Distribution

Private customers

Our mobile devices are promoted in hotels as well as on the internet. For all clients interested in our products, our web shop offers detailed information and the possibility of direct registration and order.

Business customers

Industry partners of major congresses can benefit from our technology by providing our devices to their invited delegates, hence enabling a direct communication line from the industry to the respective congress participants through sending advertisements, invitations, reminders, links for live streams of selected sessions, etc. This type of commercial messages may be more accepted when receiving them on an incentive mobile phone than on the delegates' private devices. Furthermore, the invited delegates have the additional benefit of a supplementary tool in their congress bags, which makes them stand out from standard congress participants.

Countdown Timer

The speaker counter helps to end presentations at the planned time by displaying a countdown to the moderator and speaker. The moderator controls the countdown and the speaker just sees the time left for the presentation. This is accomplished by two pocket PCs that are wirelessly connected.

Moderator

Speaker

1) Initial adjust

To adjust the time, press +1, +5, -1 or -5.

Be sure that the device is stopped before doing that.

The yellow time indication at the top always displays the complete speaking time, while the big time indication in the middle displays the time that is left for the presentation.

2) Play/Pause/Stop

Press the green PLAY button to start the countdown

Press the yellow PAUSE button to pause the countdown

Press the red STOP button to stop the countdown and

to reset the display. The actions immediately become visible on the speaker's device. The time display changes its colour to orange to start the discussion round. During the last 3 minutes of the speech the display turns red to remind the speaker to end the presentation.

3) Adjust during presentation

In rare circumstances you may want to adjust the time during a presentation:

To adjust the time during running countdown press +1, +5, -1 or -5.

To confirm the change press the green CHECKMARK.

To cancel the change press the red X.

USB Sticks

To avoid mass printouts and to follow the view of green technologies, H82 has been developing a great solution to replace Congress Agendas with Flash Drive based Data. The advantage is that every visitor will have his own USB Stick while the congress Logo will still be viewable for a long time.

Sponsors can be highlighted and linked using individual Design components; a search function will be integrated.

To enable last minute changes, H82 supplies a Mass Data Copy Service in Vienna or onsite.

All our Flash Drives meet the highest standards and are available with various data capacity and design.

Please ask for further information.

References

For many years H82 has been a capable and precious partner to us, covering technical issues for our congresses all over Europe. Most notably we appreciate the personal support and high flexibility, as well as the efficient cooperation on-site, where also short-term requirements are solved quickly and professionally.

Andreas Felser, COO & Shareholder, vereint GmbH, Austria

With H82 we as PCO have a reliable partner that plans and accomplishes projects thoroughly and, at the same time, possesses the flexibility to resolve urgent occurring challenges and difficulties at a high level. Anything goes – an often used phrase, but reality when working with H82. We can always lay our events into the hands of this professional top team.

Martin Rasmussen, Managing Director Copernicus GmbH, Germany

We, ECCO - the European Crohn's and Colitis Organisation, value the excellent work of H82. In the past we have had great experience collaborating together with H82 as a team for our congresses with a number of around 3,000 delegates. We were always able to count on their professional and state-of-the-art IT support onsite for our meetings. H82 is a reliable, competent and very customer oriented partner, who after years of cooperation knows already the specific needs of our congress delegates. It has and still is a great pleasure to acting with them in a team for our congresses.

Nicole Eichinger, COO and Congress/Society Manager European Crohn's and Colitis Organisation

We work since many years with H82 as our partner for IT equipment and solutions for our exhibitors' needs. We value the excellent work of H82 and we appreciate the support and high flexibility of the whole H82-team.

Bettina Kreiner, Managing Director, MAW-Medizinische Ausstellungs- und Werbegesellschaft, Austria
